443.22 65.75 beyond this point the parent com-Last fall the Sliver Pick started $^{156.00}_{8.07}$ to drift in this vein. The lessee met with varying success during, the Rejected driving of a drift about 150 feet Rejected long and several carloads of ore of 75.00 medium grade was shipped, but Rejected there was no hint of the big bonan-150.00 za. Considerable prospecting was 40.66 17.00 done on the fourth level and some rich ore was found in a winze from 21.00 field ore was found in a winze from 19.16 the third, sunk a short distance 50.00 south of where the main orebody was opened. Then raises were driv-

on from the fourth level and the intermediate was established. Three carloads of fair-grade ore was shipped from the intermediate and, conditions appearing promising, the level was extended north. In the work to the north on the intermediate the bonanza was found, first 20.55 as a two to three-foot width of ore 200.00 in the top of the drift. Stoping was started and from then on to today the body has grown in size and 150,00 value to the present exposed length 41.40 of 90 feet and the width of 30 to 40. The value of the ore is anything the sampler wants it to be, from \$10

to \$10,000 a ton, and the shipments have varied in value simply ac-137.63 cording to the richness of the place being mined. In the main stone 20.00 there are one, two and three-foot in the work being done on the third widths of \$200 to \$2500 ore and the level, north of the stope, as now 20.00 entire mass of material, anywhere appears probable, would be an event 4.00 in the stope, breaks from \$30 to \$50 of the greatest importance. Men as as compared with an average value who have followed closely the deof \$18 for the ore produced from the velopment of the leased block say it Red Top claim by the Goldfield Con- is highly improbable that other large solidated. The production of the bodies of ore will not be found in Consolidated from the Red Top was the vein, and to explore for such 20.00 Consolidated from the Red Top was 89.58 80.000.000. The discovery has led mediate level. At the end of this to renewed activity in the entire drift there also has been started a Columbia mountain section, north winze which will be continued only and northwest of the Red Top claima short distance, or merely far and a number of deals are now unenough for the dip of the vein to be der consideration which will mean determined so that work on the more work in this section heretofore fourth level can be started at the neglected to a great extent best place. Opening of the ore on the fourth level will give an additional 65 feet of backs to the in-

> other companies, visited the lease vesterday and, after a through inspection, he returned to Tonopah with a number of specimens. The place from where these specimens were taken is where the ore is go ing up under the drift on the third NEW YORK STOCK EXCHANGE level and it is obvious to everyone that visits the lease that this ore is going to continue strong and perhaps grow riheer as the oxidized

zone is entered. The lease still is in its infancy. but enough work has been done to show that many more thousands of tons will be shipped before the orebody as exposed at present and indicated shall have been exhausted The gross production is now nearing the \$100,000 mark and recent shipments have been giving the exceptionally high return to the Silver Pick of more than 50 per cent of the gross value of the ore after the payment of royalty, mining, transportation, treatment and all other costs. In this way money is accumulating fast in the treasury, and after spending more than \$300,000 in development work in the Goldfield district, practically all raised by assessments, it is evident that the assessment period has been left far behind and that the dividend period is near. The recent extension of the developed oreshoot for 40 feet beyond the north wall of the big stope, the winze proving practically conclusively that the shoot will be found on the fourth level, and the assurance that the ore extends above the third level have at least doubled the value of the lease, in the opinion of mining men who

have inspected the workings in the last few days. The opening of ore 71, HE STROLLS 'CROSS CONTINENT

Still going strong though past three score years and ten, Henry Stewart, of sturdy Scotch stock, is now strolling from San Diego, Cal., to Washington, D. C. He expects to reach the National Capitol in June. Stewart has walked in Egypt and Africa and has made fifteen walks across the American continent.

The discovery made by the Silver Pick has had an improtant zas-bave not yet been exhausted Ore is being broken in the big The work, for instance, proves the

also will provide a more direct outlet to the shaft for the ore.

Agricultural Sweden Is Now Electrified to the Extent of One-Third of Entire Area.

In view of the fact that more than one-third of agricultural Sweden is now electrified, it is proposed that the model farm be as nearly 100 per cent electrically operated as possible so that Swedish farmers who are now in a position to change horse for electric power, may be enabled to view demonstrations of how "white coal" can be utilized in the country.

The request for the electrified model farm comes from the Nation al Association for Electrification of Rural Sweden. In its communication to the government this body points out the necessity for training Swedish farmers in making use of electrical power. It proposes that farm electrification he made a special subject of study at the agricultural schools and colleges of the coun
